Ideal Customer Profile

GameMaster AI | Who to Sell To & Who to Walk Away From

Based on real venue outreach — Las Vegas market, February 2026

Two Types of Venues Exist

Not every board game venue is a fit. The business model determines everything.

Experience-Driven Café

- Charges a cover fee ($5–$10)
- Revenue from dwell time (food, drinks, game sales)
- Staff actively teaches & engages customers
- Community events, game nights, loyalty programs

Lending Library / Retail Store

- Free game borrowing, no cover charge
- Revenue relies on hope: "maybe they buy something"
- No teaching, no customer engagement
- No CRM, no outreach, no community building

Ideal Customer Profile

Cover Charge Model	Charges $5–$10 per visit. Proves they value the in-store experience and have a revenue baseline beyond retail.
Dedicated Teaching Staff	Employs staff who teach games. This is the $2,400–$4,800/mo labor cost that GameMaster AI directly replaces.
Growth Mindset Owner	Thinks in terms of customer lifetime value and upside — not just line-item costs. Willing to invest in tools that drive revenue.
Customer Retention Systems	Has a CRM, email list, or social media presence. Can promote game nights, beginner events, and drive repeat visits.
Community & Events	Runs game nights, tournaments, teaching sessions. Understands that engagement = dwell time = revenue.

Non-ICP: Walk Away Signals

Free Lending Model	Games are borrowed for free with no cover charge. No value capture at point of engagement — customers walk in and out without spending.
Cost-Only Mindset	Owner only sees subscription as an expense, never as a revenue multiplier. Asks "how do I make this back" instead of "how does this grow my business."
No Teaching Culture	Staff doesn't teach games or engage customers. Store feels empty. No incentive for customers to stay and play in-store.
No CRM / No Outreach	Can't contact customers for events or promotions. No email list, no loyalty program, no way to drive repeat visits.
Pessimistic Ownership	Rejects ROI data, doesn't believe in investing in the business. You'd have to fix their entire operation before your product can work.

Why Business Model Matters

GameMaster AI unlocks revenue streams that only work when customers stay & play in-store.

Cover Fee	$5–$10/visit
Food & Bev	$8–$20/group
Game Sales	Impulse buys
Repeat Visits	2–4x/month
Events	Premium nights

The Dwell Time Equation

Longer stays = more spend. GameMaster AI removes the #1 barrier (learning time) and converts it into play time.

Free lending kills dwell time — customers take games home. No dwell time = no ancillary revenue.

Two Different Pitches for Two Models

ICP Pitch: Labor Replacement

"Replace $2,400–$4,800/mo in teaching labor costs with a $99–$349/mo subscription."

- Concrete, measurable ROI
- Solves an existing pain point
- Easy for owner to justify
- Proven economics

HIGH CONVERSION

Non-ICP Pitch: Speculative Upside

"Maybe people will stay longer and buy things if we help them learn games faster."

- Speculative, no proven baseline
- Requires business model change
- Owner must believe in investment
- You become unpaid consultant

LOW CONVERSION

Qualifying Questions

Ask these before investing time in a prospect. Red flags = walk away.

Do you charge a cover fee or entry charge?	Yes, $5–$10	No, everything is free
Do you have staff that teaches games?	Yes, it's a big part of our model	No, people figure it out
How do you contact your regulars?	Email list, social, CRM	We don't really do that
Do you run game nights or events?	Yes, regularly	No, not really
How do you think about ROI on tools?	If it drives revenue, it's worth it	I just look at what it costs me

Key Takeaway

Don't sell to venues that need you to fix their business first.
Sell to venues that already have the infrastructure
and just need the tool.

Use free trials with non-ICP venues for data collection only.
